

## TYNOR HEATING PAD (I-73 HEATING PAD ORTHO)

The Tynor Heating Pad Ortho is a user-friendly device designed to provide controlled hot fomentation. Hot fomentation is particularly beneficial for sub-acute and chronic injuries, as it induces vasodilation and aids tissue healing. The warmth helps decrease muscle spasms, relax tense muscles, relieve pain, and can increase the range of motion. When used in conjunction with pain-relieving drugs, hot fomentation has a synergistic effect to enhance healing.

### Attributes

- **ROBUST DESIGN:** Comes with a water-repellent thermostat, soldered wire joint, and detachable cord. Ensures uniform heating and provides stable heating temperature.
- **PTFE EXTRUDED HEATING ELEMENT:** Offers complete protection against electric shock and higher temperature stability, ensuring an extended functional life and no passive current leakage.

### Features

- **90 min. Shutoff time:** Provides extra safety protection by automatically turning off after 90 minutes.
- **FABRIC PAD:** Provides a soft, feather-like feel, preventing hot skin burns and ensuring good aesthetics. The flexible fabric pad conforms to the body contours and is washable for easy cleaning and maintenance. It ensures excellent workmanship and durability.
