

Contoured L.S. Support (A-03): Discovering Relief & Support for the Lumbo Sacral Region

Contoured L.S. Support is a support that is scientifically designed to support and immobilize the lumbosacral region and correct the postural deformity to allay low back pain syndrome.

Attributes

- **ANATOMICALLY CONTOURED RIGID SPLINTS**
The anatomically contoured rigid splints maintain the natural low back curve, allay pain due to mechanical stresses, help get rid of postural fatigue and ensure adequate back reinforcement for perfect immobilization.
- **DOUBLE PULL MECHANISM**
Double pull mechanism ensures strong fastening for secure fitting, better immobilization and prevents belt slippage.
- **ALUMINUM SPLINTS**
The aluminum splints in the product are malleable and customizable. They offer accurate support and are light in weight. They offer better patient compliance. The contoured and rigid splinting provides immobilization in the neutral position to stabilize the vertebral fractures.
- **LARGE HOOK LOOP PANEL**
Large hook loop panel allows controlled compression, flexibility in sizing and easy application and removal of the belt.

- **ETHAFOAM BACK PAD**
Contoured L.S. Support offers high cushioning even in thin sections. Provides better comfort, without compromising immobilization.
- **SIZE: S-M-L-XL-XXL**
