

TYNOR E-01 ELASTIC WRIST SPLINT

Elastic Wrist Splint is designed to immobilize and provide firm support to hand and wrist in various orthopedic conditions. It maintains the wrist in the dorsi-flexion/functional position while allowing full range of motion to fingers and thumb. It compresses and retains the body heat to allay the local pain and inflammation. The product can be removed to permit therapy sessions, washing, and hygiene.

Attributes

- **REMOVABLE ALUMINUM SPLINTS**
Provides customized fitting, adequate grip, and immobilization. The contours of the splint are matched to the contours of the wrist according to the degree of dorsi-flexion required.
- **BUILT-IN OPENING FOR THUMB ABDUCTION**
Helps the thumb remain relaxed and ensures no fatigue. It improves comfort, offers better pain relief and healing.
- **HOOK LOOP CLOSURES**
The hook loop closures ensure optimal compression and offer an easy application and removal process.
- **HIGH QUALITY ELASTIC WEBBING**
It is made from a strong, durable elastic material that is highly porous and comfortable. It maintains the wrist in the dorsi-flexion/functional position while allowing full range of motion to fingers and thumb.
