

TYNOR E-11 ELBOW SUPPORT

Tynor Wrist Brace with Double Lock supports, protects and partially immobilizes the wrist. It compresses the area and retains the body heat to allay local pain and inflammation. Use of high quality material provides excellent compressive strength and retains shape & size for a long time. Excellent porosity further enhances comfort.

Attributes

- **ANATOMICAL SHAPE**
The anatomical shape with extra stretchability at the elbow region provides easy elbow movement along with better comfort, compression and grip.
- **BILAYERED COTTON**
The double layer of cotton on the inside ensures a dermophillic interface between the skin and the product ensuring maximum comfort.
- **BILAYERED NYLON**
The double layer of nylon on the outside offers longer life and appealing aesthetics. It also retains body heat to aid in faster healing.
- **FOUR-WAY STRETCHABILITY**

- **Elbow Support**
- Elbow Support is used to provide firm compression, warmth & support to the forearm and elbow joint, to alleviate pain, inflammation and stiffness, generally associated with old age, arthritis, sports injury etc. Woven on the state of art CNC looms to provide seamless, tapered tubes, in a double layer of nylon fiber, Spandex and long staple cotton yarn ensuring long life, maximum comfort and appealing aesthetics.
