

## TYNOR J-03 WRIST BRACE WITH THUMB (NEOPRENE)

Tynor Wrist Brace With Thumb (Neoprene) is a protective, supportive, and immobilizing wrist brace that allows one to move their thumbs and fingers freely and naturally while interrupting the movement of their wrist. The application of this dressing compresses the area and retains the body heat in order to relieve local pain as well as inflammation. The thumb is kept in a neutral abduction position by this brace.

### Attributes

- ANATOMICAL THUMB OPENING

The product provides slight abduction for better comfort of the thumb. It also allows full finger dexterity but prevents wrist rotation.

- WRAP AROUND DESIGN AND UBL CLOSING SYSTEM

It ensures easy application and removal. Provides customized compression and fitting. Better sizing flexibility, grip and support.

- NEOPRENE LAYER BONDED WITH NYLON FABRIC

It has four-way stretchability and compression which ensures longer life. It has appealing aesthetics with color fastness.

- THICKER NEOPRENE

It has better body heat retention.
